**Situational Analysis**

<b>Situation Details</b>	<b>Other Details (optional)</b>	<b>Item Usage (function)</b>
SD02 - High speed		IU01 - Correctly used
SD02 - High speed		IU02 - Incorrectly used
SD02 - High speed		IU01 - Correctly used
SD02 - High speed	The driver is distracted and unintentionally leaves the ego lane.	IU01 - Correctly used

Situation Description	Function	Deviation
Normal driving on a highway during rain (slippery road) with high speed and correctly used system.	Lane Departure Warning (LDW) function shall apply an oscillating steering torque to provide the driver with haptic feedback.	DV04 - Actor effect is too much
Normal driving on country roads during normal conditions with high speed (the driver is misusing the lane keeping assistance function as an autonomous function).	Lane Keeping Assistance (LKA) function shall apply the steering torque when active in order to stay in ego lane.	DV03 - Function always activated
Normal driving on a highway during rain (slippery road) with high speed and correctly used system.	Lane Keeping Assistance (LKA) function shall apply the steering torque when active in order to stay in ego lane.	DV19 - Sensor detection is wrong
Normal driving on a highway during rain (slippery road) with high speed and correctly used system (the driver is distracted and unintentionally leaves the ego lane).	Lane Departure Warning (LDW) function shall apply an oscillating steering torque to provide the driver with haptic feedback.	DV05 - Actor effect is too less

Hazard Identification	
Deviation Details	Hazardous Event (resulting effect)
The LDW function applies very high oscillating torque (above limit).	EV00 - Collision with other vehicle
The LKA is always active, leading to misuse by the driver as an autonomous function.	EV00 - Collision with other vehicle
The LKA incorrectly detects vehicle position w.r.t. the ego lane.	EV00 - Collision with other vehicle
The LDW function applies very low oscillating torque (below limit).	EV00 - Collision with other vehicle

Event Details	Hazardous Event Description	Exposure (of situation)
High haptic feedback can affect driver's ability to steer as intended. The driver could lose control of the vehicle and collide with another vehicle or with road infrastructure.	The LDW function applies very high oscillating torque (above limit).	E3 - Medium probability
Constant activation of the LKA function can lead to misuse by the driver as an autonomous function. The driver could stop paying attention to the road and collide with another vehicle or with road infrastructure.	The LKA is always active, leading to misuse by the driver as an autonomous function.	E2 - Low probability
Incorrect detection of vehicle position w.r.t. the ego lane can result in the steering torque being applied unnecessarily or in the wrong direction. The driver could lose control of the vehicle and collide with another vehicle or with road infrastructure.	The LKA incorrectly detects vehicle position w.r.t. the ego lane.	E3 - Medium probability
Insufficient haptic feedback does fails to direct driver's attention back to the road. The driver could leave the ego lane and collide with another vehicle or with road infrastructure.	The LDW fails to direct driver's attention back to the road.	E2 - Low probability

Hazardous Event Classification			
Rationale (for exposure)	Severity (of potential harm)	Rationale (for severity)	Controllability (of hazardous event)
Highway driving is a regular activity, rainy weather occurs occasionally depending on location.	S3 - Life-threatening or fatal injuries	Collision at high speed.	C3 - Difficult to control or uncontrollable
Highway driving is a regular activity, rainy weather occurs occasionally depending on location. Additionally, driver's misuse of the system has to take place for the hazard to appear.	S3 - Life-threatening or fatal injuries	Collision at high speed.	C3 - Difficult to control or uncontrollable
Highway driving is a regular activity, rainy weather occurs occasionally depending on location.	S3 - Life-threatening or fatal injuries	Collision at high speed.	C3 - Difficult to control or uncontrollable
Highway driving is a regular activity, rainy weather occurs occasionally depending on location. Human drivers are prone to occasionally getting distracted from the driving task, leading to hazardous situations.	S3 - Life-threatening or fatal injuries	Collision at high speed.	C3 - Difficult to control or uncontrollable

Determination of ASIL and Safety Goals		
Rationale (for controllability)	ASIL Determinat ion	Safety Goal
Lost control of the vehicle at high speed on a slippery road.	ASIL C	The oscillating steering torque from the LDW function shall be limited.
The driver does not pay attention to the road, thus can't control the vehicle.	ASIL B	The LKA function shall be time limited and the additional steering torque shall end after a given time interval so that the driver cannot misuse the system for autonomous driving.
Lost control of the vehicle at high speed on a slippery road.	ASIL C	The LKA function shall deactivate if certainty of the vehicle position detection falls below certain limit (e.g. due to missing lane markings or difficult weather conditions).
The driver did not pay attention to the road in the first place. The vehicle is traveling at high speed on a slipper road.	ASIL B	The LDW function shall ensure the oscillating steering torque is high enough to be noticed by driver.

SD03 - Low speed	Night time + Obstacle on the road and no other illumination on road	IU01 - Correctly used
SD03 - High speed	Night time + Obstacle on the road or upcoming curve	IU01 - Correctly used
SD02 - High speed	Night time + Oncoming vehicle	IU01 - Correctly used
SD04 - High speed	Night time + Obstacle on the road and no other illumination on road	IU01 - Correctly used

Situation Description	Function	Deviation
Normal Driving on a City Road in Normal Conditions at Low Speed at Night with an Obstacle on the Road	Low beam illuminates the roadway in the dark	Function not activated

Situation Description	Function	Deviation
Normal Driving on City Road during Normal conditions with Low speed (Night time + Obstacle on the road)	Low beam illuminates the roadway in the dark	DV01 - Function not activated
Normal Driving on City Road during Snowfall (degraded view) with Low speed (Night time + Obstacle on the road and no other illumination on road)	Low beam illuminates the roadway in the dark	DV01 - Function not activated
Normal Driving on Highway during Snowfall (degraded view) with High speed (Night time + Obstacle on the road or upcoming curve)	Low beam illuminates the roadway in the dark	DV01 - Function not activated
Normal Driving on Country Road during Normal conditions with High speed (Night time + Oncoming vehicle)	Low beam illuminates the roadway in the dark	DV01 - Function not activated
Normal Driving on Country Road during Snowfall (degraded view) with High speed (Night time + Obstacle on the road and no other illumination on road)	Low beam illuminates the roadway in the dark	DV01 - Function not activated

Hazard Identification	
Deviation Details	Hazardous Event (resulting effect)
Both headlights stop working	Front collision with obstacle

Hazard Identification	
Deviation Details	Hazardous Event (resulting effect)
Both headlights stop working	EV04 - Front collision with obstacle
Both headlights stop working	EV04 - Front collision with obstacle
Both headlights stop working	EV04 - Front collision with obstacle
Both headlights stop working	EV08 - Collision with other vehicle
Both headlights stop working	EV04 - Front collision with obstacle

Event Details	Hazardous Event Description	Exposure (of situation)
Vehicle crashes into the obstacle with injury to driver	Total loss of low beam	E4 - High probability

Event Details	Hazardous Event Description	Exposure (of situation)
Vehicle crashes into the obstacle with injury to driver	Total loss of low beam	E4 - High probability
Vehicle crashes into the obstacle with injury to driver	Total loss of low beam	E1 - Very low probability
Vehicle crashes into the obstacle or road infrastructure with injury to driver and any others present	Total loss of low beam	E2 - Low probability
Vehicle crashes into the oncoming vehicle or road infrastructure	Total loss of low beam	E4 - High probability
Vehicle crashes into the obstacle or road infrastructure with injury to driver and any others present	Total loss of low beam	E2 - Low probability

Hazardous I	
Rationale (for exposure)	Severity (of potential harm)
night driving in the city is a regular activity	S1 - Light and moderate injuries

Hazardous I	
Rationale (for exposure)	Severity (of potential harm)
night driving in the city is a regular activity	S1 - Light and moderate injuries
night driving in the city on completely unilluminated roads while it is snowing is rare	S1 - Light and moderate injuries
High driving is part of regular driving, however, heavy snow occurs a few times a year	S3 - Life-threatening or fatal injuries
country driving is part of regular driving	S3 - Life-threatening or fatal injuries
country driving is part of regular driving, however, heavy snow occurs a few times a year	S3 - Life-threatening or fatal injuries

**Event Classification**

<b>Rationale (for severity)</b>	<b>Controllability (of hazardous event)</b>
In city traffic, speed of vehicle is expected to be low	C0 - Controllable in general

**Event Classification**

<b>Rationale (for severity)</b>	<b>Controllability (of hazardous event)</b>
In city traffic, speed of vehicle is expected to be low	C0 - Controllable in general
In city traffic, speed of vehicle is expected to be low	C1 - Simply controllable
On highway speed of vehicle is expected to be high	C2 - Normally controllable
On country roads speed of vehicle is expected to be high	C1 - Simply controllable
On country roads speed of vehicle is expected to be high	C3 - Difficult to control or uncontrollable

	<b>Determination of ASIL and Safety Goals</b>	
<b>Rationale (for controllability)</b>	<b>ASIL Determination</b>	<b>Safety Goal</b>
At city speed, most drivers will be able to control the situation by applying brakes and there is additional illumination on city roads	QM	Total Loss of Beam Shall Be Prevented

	<b>Determination of ASIL and Safety Goals</b>	
<b>Rationale (for controllability)</b>	<b>ASIL Determination</b>	<b>Safety Goal</b>
At city speed, most drivers will be able to control the situation by applying brakes and there is additional illumination on city roads	QM	Total loss of low beam shall be prevented
On completely unilluminated city roads, drivers usually drive at lower end of city speeds and hence are expected to be able to control vehicle	QM	Total loss of low beam shall be prevented
When driving on highway with low beam, it can be expected that there are other vehicles and there is some form of illumination on road and hence >90% drivers are able to brake and control the vehicle. And also use other forms of warning (e.g. hazard lights) to signal malfunction	A	Total loss of low beam shall be prevented
Since there is usually no other form of illumination to be expected on country road, it will be difficult for the average driver to control the vehicle in such a situation	B	Total loss of low beam shall be prevented
Since there is usually no other form of illumination to be expected on country road, it will be difficult for the average driver to control the vehicle in such a situation	B	Total loss of low beam shall be prevented

**Exposure**

ID	Description
E0	Incredible
E1	Very low probability
E2	Low probability
E3	Medium probability
E4	High probability

**Severity**

ID	Description
S0	No injuries
S1	Light and moderate injuries
S2	Severe and life-threatening injuries
S3	Life-threatening or fatal injuries

**Controllability**

ID	Description
C0	Controllable in general
C1	Simply controllable
C2	Normally controllable
C3	Difficult to control or uncontrollable

Duration (of situation)
Not specified
<1 % of average operating time
1 % to 10 % of average operating time
>10 % of average operating time

Remarks
No injuries
Light and moderate injuries
Severe and life-threatening injuries (survival probable)
Life-threatening injuries (survival uncertain), fatal injuries

Remarks
Controllable in general
99 % or more of all drivers or other traffic participants are usual
90 % or more of all drivers or other traffic participants are usual
Less than 90 % of all drivers or other traffic participants are usual

Frequency (of situation)	Reference
	<a href="#">E0 - Incredible</a>
Occurs less often than once a year for the great majority of drivers	<a href="#">E1 - Very low probability</a>
Occurs a few times a year for the great majority of drivers	<a href="#">E2 - Low probability</a>
Occurs once a month or more often for an average driver	<a href="#">E3 - Medium probability</a>
Occurs during almost every drive on average	<a href="#">E4 - High probability</a>

Probability of Injuries	Reference
AIS 0 and less than 10 % probability of AIS 1-6	<a href="#">S0 - No injuries</a>
More than 10 % probability of AIS 1-6 (and not S2 or S3)	<a href="#">S1 - Light and moderate injuries</a>
More than 10 % probability of AIS 3-6 (and not S3)	<a href="#">S2 - Severe and life-threatening injuries</a>
More than 10 % probability of AIS 5-6	<a href="#">S3 - Life-threatening or fatal injuries</a>

	Reference
	<a href="#">C0 - Controllable in general</a>
fully able to avoid harm	<a href="#">C1 - Simply controllable</a>
partially able to avoid harm	<a href="#">C2 - Normally controllable</a>
usually able, or barely able, to avoid harm	<a href="#">C3 - Difficult to control or uncontrollable</a>
